

# Digital Filter Structures summary

M. Zikou, Prof. Ioannis Pitas Aristotle University of Thessaloniki pitas@csd.auth.gr www.aiia.csd.auth.gr Version 1.2.1

- IIR Filter Structures
  - Direct Filter Structure
  - Cascade Filter Structure
  - Parallel Filter Structure
  - Transposed Filter Structure
- FIR Filter Structures

Artificial Intelligence & Information Analysis Lab

- Direct Filter Structure
- Cascade Filter Structure
- Parallel Filter Structure
- Frequency Sampling Structure

#### Criteria for suitable structure

- 1. Number of additions and multiplications
- 2. Number of additions and multiplications (for parallel implementation)
- 3. Number of registers and delay units
- 4. Calculation speed for serial or parallel implementation
- 5. Characteristic diagrams of errors

#### Fundamental blocks

- a) Adders
- b) Multipliers
- c) Delay units

Implementation of the secondary IIR digital filter based on the fundamental blocks:

$$y(n) = a_1(n-1) + a_2y(n-2) + bx(n)$$

- IIR Filter Structure
- FIR Filter Structure

#### **Structures**

- Direct Filter Structure I
- Irregular Filter Structure II
- Direct Filter Structure II
- Cascade Filter Structure
- Parallel Filter Structure
- Transposed Direct Filter Structure I
- Transposed Direct Filter Structure II

An IIR filter with the following transfer function:

$$H(z) = \frac{\sum_{k=0}^{M} b_k z^{-k}}{1 - \sum_{k=0}^{N} a_k z^{-k}}$$

can be described by the function:

$$y(n) = \sum_{k=0}^{N} a_k y(n-k) + \sum_{k=0}^{M} b_k y(n-k)$$

#### **Direct Filter Structure I**

A simple implementation of the IIR filter described.

![](_page_8_Picture_5.jpeg)

![](_page_9_Picture_0.jpeg)

#### **Direct Filter Structure II**

![](_page_9_Figure_3.jpeg)

The delay lines are merged into one.

Minimum number of delays is achieved.

![](_page_9_Picture_6.jpeg)

![](_page_10_Picture_0.jpeg)

#### **Cascade Filter Structure**

![](_page_10_Figure_3.jpeg)

Used in the implementation of digital filters, because there is only one elementary block whose coefficients are changing.

![](_page_10_Picture_5.jpeg)

![](_page_11_Picture_0.jpeg)

#### **Parallel Filter Structure**

If M < N then:  $H(z) = \sum_{k=1}^{[(N+1)/2]} \frac{\gamma_{0k} + \gamma_{1k} z^{-1}}{1 - \alpha_{1k} z^{-1} - \alpha_{2k} z^{-2}}$  x(z)  $H_2(z)$   $H_2(z)$   $H_N(z)$ 

![](_page_11_Picture_4.jpeg)

![](_page_12_Picture_0.jpeg)

#### Transposed Direct Filter Structure I

![](_page_12_Figure_3.jpeg)

![](_page_13_Picture_0.jpeg)

#### Transposed Direct Filter Structure II

![](_page_13_Figure_3.jpeg)

![](_page_13_Picture_4.jpeg)

![](_page_14_Picture_0.jpeg)

- IIR Filter Structure
- FIR Filter Structure

![](_page_14_Picture_4.jpeg)

![](_page_15_Picture_0.jpeg)

#### **Structures**

- Direct Filter Structure
- Transposed Direct Filter Structure
- Cascade Filter Structure
- Lagrange Filter Structure
- Frequency Sampling Structure
- Linear Phase Even Structure
- Linear Phase Odd Structure

![](_page_15_Picture_10.jpeg)

![](_page_16_Picture_0.jpeg)

FIR filter is described by the equation:

$$H(z) = \sum_{n=0}^{N-1} h(n) z^{-n}$$

![](_page_16_Picture_4.jpeg)

![](_page_17_Picture_0.jpeg)

#### **Direct Filter Structure**
